EXTRACORPOREAL SHOCK WAVE THERAPY (ESWT)

NOW
AVAILABLE!

The LiKAWAVE® VARIO 3i was designed and developed as a high-end ESWT device in collaboration with orthopaedic specialists. The focus is on well-tolerated treatments ranging from orthopedics and sports medicine to cosmetic applications, as well as high ergonomics for the user. Another advantage: the 3i grows with you! The LiKAWAVE® VARIO 3i lite is an entry-level device that can be upgraded at any time to the full version as required.

TECHNICAL SPECIFICATIONS:

Height: 24 cm (incl. feet)	Frequency: 50/60 Hz
Depth: 31 cm	Compressor pressure: up to 6.5 bar
Width: 31 cm	Energy flow density: 0.88 mJ/mm ²
Weight: 8.3 kg	Pulse frequency: max. 25 Hz
Screen: 10.1"	Frequency steps: 1–25
VARIO MODES: 3 + 1 (linear)	Intensity steps: 1–25
Shockwave number: unlimited	Housing colour:
Voltage range: 100–240 V	RAL 9003 RAL 9007

The LiKAWAVE® VARIO 2i is the innovative entry point for the modern ESWT device class. It was specifically developed for easy use while delivering effective therapy, combining all relevant basic functions and the most important ergonomic advantages of the LiKAWAVE® VARIO i-FAMILY.

TECHNICAL SPECIFICATIONS:

Height: 23 cm (incl. feet)	Frequency: 50/60 Hz
Depth: 32 cm	Compressor pressure: up to 6.5 bar
Width: 30.5 cm	Energy flow density: 0.88 mJ/mm ²
Weight: 6.4 kg	Pulse frequency: max. 15 Hz
Screen: 7"	Frequency steps: 1–15
VARIO MODES: 1 + 1 (linear)	Intensity steps: 1–15
Shockwave number: unlimited	Housing colour: RAL 9003
Voltage range: 100–240 V	Base colour: RAL 9007

iNNOVA- TIONS INSIDE!

THE HD CERAMIC PROJECTILE

The innovative LiKAWAVE® VARIO projectile is made of HD ceramic and has a much longer service life than conventional projectiles with its corrosion resistance and polished ceramic surface.

In addition, it reduces the negative portion of the pressure curve. The HD ceramic also increases the energy of the shockwave.

THE INVERT MODE

The new invert technology is based on a reversal of the pulse relationship of current VARIO modes:

higher pulse power – reduced pulse density; reduced pulse power – higher pulse density. This inversion increases the range of energy that can be applied. Like the other modes, the Invert mode reduces acute pain by delivering powerful individual pulses at a low pulse density.

THE WIDE FOCUS

The high-energy 'wide focus' technology generates an area focus instead of a conventional very point-form focus volume. Compared to radial or focused devices, the "Wide Focus" technology combined with alternating treatment modes offers the advantage of precisely localizing the treatment area without requiring a specific penetration depth.

OVERVIEW OF THE i-FAMILY

	2i	3i lite	3i
Wide focus	x	x	x
HD ceramic projectile	x	x	x
EasyTouch display	-	x	x
Ergonomic operation	x	x	x
Patient database	-	with upgrade	x
Indication suggestions	-	x	x
Trigger-point treatment	x	x	x
Indication of trigger-points on the display	-	x	x
Linear mode	x	x	x
Pulse mode	-	with upgrade	x
Triangle mode	x	with upgrade	x
Invert mode	-	with upgrade	x

Porter with optimal freedom of movement and efficient organisation including bracket for handpiece, cable winder, rack for gel bottle, integrated **accessory case**

Illustrations show different equipment

EFFECTIVE TREATMENT FOR RELIEVING ACUTE PAIN:

- Chronic tendinopathies
- Calcific tendinitis
- Tennis elbow
- Patellar tip syndrome
- Heel spurs
- Pseudoarthrosis
- Muscular pain of the musculoskeletal system
- Trochanteric bursitis
- and reduction in the severity of erectile dysfunction

UPPER EXTREMITY

Shoulder treatment: trapezius muscle; levator scapulae muscle; rhomboid muscle; minor and major pectoral muscles; subscapular muscle; teres minor muscle

Epicondylitis lateralis: long and short radial extensor muscle

Epicondylitis medialis: radial flexor muscle; radial flexor muscle of the wrist

Arthritis of the thumb: extensor pollicis brevis muscle; extensor pollicis longus muscle

LOWER EXTREMITY

Hips (coxa): iliopsoas muscle; adductor magnus & longus muscles; tensor fasciae latae muscle; quadratus femoris muscle (also gluteus muscle)

Knee (genus): quadratus femoris muscle; vastus lateralis muscle; biceps femoris muscle; popliteal muscle

Shin splint: anterior tibial nerve; gastrocnemius muscle

UPPER EXTREMITY

Cervical vertebrae: trapezius muscle; splenius capitis muscle; spinalis capitis muscle; semispinalis capitis muscle; obliquus inferior muscle; sternocleidomastoid muscle

Thoracic spine: serratus muscle; longissimus thoracis muscle; rhomboid muscle; iliocostalis lumborum muscle (including trigger points on the affected shoulder)

Lumbar spine: iliopsoas muscle; gluteus medius-minimus muscle; piriformis muscle; quadratus lumborum muscle

LOWER EXTREMITY

Foot (carpus): gastrocnemius muscle; anterior tibial muscle; soleus muscle; plantaris muscle

Achillodynia: gastrocnemius muscle; soleus muscle

Heel spurs: gastrocnemius muscle; plantaris muscle
